

resolution may be the web page will scale to fit the page. It will be 100% of the screen

The first step is to make a table with 100% height and 100% width. You could make it

Step 4: Within the table measure cells in terms of pixels except

This a another very important step. You need to give a fixed measurement to all your

This is a sample web site layout

that demonstrates the design of web sites for all resolutions.....

This is a sample web site layout

that demonstrates the design of

The first and last columns are given fixed measurements of 120 px and 10 px

The middle column (content column) is given no measurement so that it will scale

. The same logic is used for rows (for the height). All the rows have a fixed height

web sites for all resolutions.....

except for the content row which will scale to fit the page.

top left corner and your navigation buttons in the top right or left navigation bar. For more complex layouts you will need to use background fills to design your web sites.

Step 6: Test your site in all the resolutions

1. Right click on your Desktop and click on Properties

5. If you can see the bitmap clearly you can click on Apply

Once you have designed your tables in terms of percentages you need to insert your

Remember since you are designing web sites to fit all resolutions you need to position your images accordingly (for your header). The easiest principle I follow (if possible) is to use the

top left and right corners for fixed images and let the middle tile according to the size of the

The last step is to test your site in all the resolutions that are available on your computer. To do

3. Under Desktop area click shift the scale to 800 x 600, 1024x768 or higher if possible

4. Once you have chosen the resolution you want to check the site in, click on the Test

Check your site in all the resolutions and if it is working fine you've successfully designed and
